Although there is no doubt that it has greatly affected the travel market, it has also made room for new business models. One of them is promoting services for which consumers are not willing to pay, or in which they are willing to pay a lot less, compared to services provided in the past. This phenomenon, which has been observed in other countries, has been observed in Spain: hotels and airlines with a significant number of empty seats, and tourism regions where supply exceeds demand, are showing particularly reduced occupancy rates. 5. Euro-region tourism trends Another result of the economic crisis is the increasing diversification of tourism regions. The situation of economic and financial stability and the subsequent strengthening of the euro have in part contributed to this trend by allowing the geographical expansion of the supply of tourism services. But a better-known factor is the rising demand for niche tourism services. This demand can be understood as a demand for a level of quality and service that is not the norm, or the level that is provided in the tourist regions where the cost of tourism has been considerably reduced. Some services that are not necessarily more expensive, but rather of a higher level of quality and/or reliability, have therefore been increasingly appreciated and are proving popular with travelers. It is also important to bear in mind that this phenomenon, as well as being one of the results of the economic crisis, has also been observed in other times, at least in those that preceded the crisis. For example, the trend toward a greater specialization of tourism, and also toward the creation of niche tourism, was already well-established in the 1960s and 1970s, even though the crisis had not yet started. This trend was, in part, due to certain shifts in travel demand, but was also attributable to the emergence of new services. 6. Trend toward total leisure and quality tourism The impact of the economic crisis on tourism demand can also be observed in the evolution of services that have been made accessible in the past. For example, when looking at the evolution of leisure and tourism services, it is striking to see how some companies have started to offer previously unavailable services, particularly in the realm of travel and leisure. 7. Trend toward quality tourism 82157476af
